

Abstract Of The Disclosure

5 A safety seat for land, air and sea vehicles is provided. The
safety seat has a safety belt harness and can be secured between the
floor and ceiling of a vehicle via securement straps provided above and
below the seat. The safety belt harness comprises two lap belts and
two shoulder belts that extend from the lap belts. Also provided is an
activating device that, as an extension of the shoulder belts, is guided
below a seat portion to the entry region thereof. A respective
tensioning strap is yieldingly disposed between the shoulder belts and
10 the front securement straps.
